

General

The Combi-grid is manufactured in powder-coated galvanized sheet steel. Suitable for mounting on outside walls. The outside-air intake (pos 1) and exhaust-air (pos 2) are separated from each other so that the air cannot 'short circuit'.

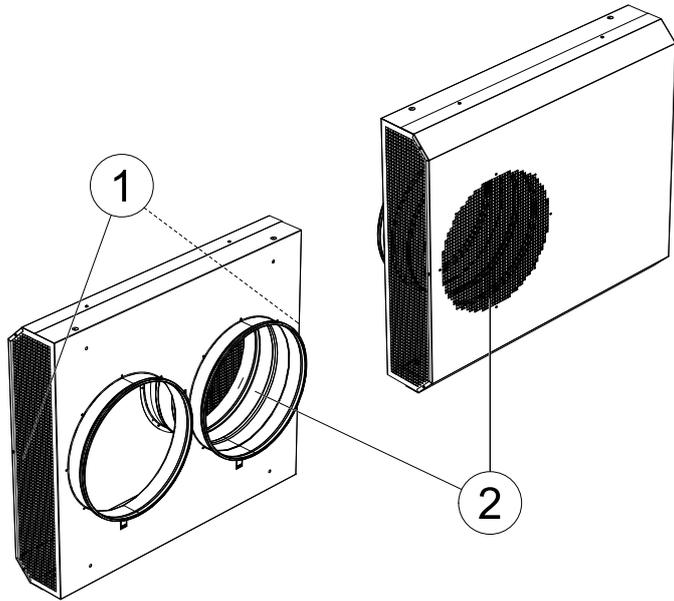

Fig. 1

Mounting

4 screws on the front facilitate mounting and removing for cleaning. The grid has a back plate which is first screwed and fitted to the wall. The grid can be mounted with the exhaust-air outlet either on the right or the left.
